EREM:

EREM is a French company specialized in industrial mechanics and boiler making. Since 1973, EREM has been providing solutions to mineral wool and glass wool manufacturers. Thanks to a skillful workforce paired up with modern NC machine-tools, EREM is able to provide mineral wool manufacturers with top quality flights. The flights manufactured by EREM come in steel or stainless steel. EREM also offers to install and pre-assemble flights on chains in order to make the replacement operations quicker.

"Think systematically & embrace functional thinking"

The main manufacturing operations are automated, thanks to the number of NC machine-tools (TRUMPF 6000W, 2 welding robots, MAZAK VTC 800-30, etc.) owned by EREM. These high efficiency means of production allow for a high repeatability of the process and the fabrication of consistent series of parts in a very short span of time. Our know-how also includes the chaining up of the flights in our workshop and their installation on site. EREM is used to working hand in hand with its customers to develop fabrication standards that allow for an increased functionality and the lowest tolerances.
